

SLUSH MACHINE INSTRUCTIONS

Yield Information: Each side of the machine holds 3 Gallons

WARNINGS:

ONLY SUGAR SODA IS ALLOWED IN THE MACHINES (DIET WILL BREAK THE MACHINE)

KEEP IN COOL AREA: Machine will not work well in temps over 75*. If operating outside, make sure to place machine in a shaded area and allow 3 to 4 hours to freeze.

DO NOT ADD ICE TO THIS MACHINE

Ingredients: 3 gallons of bottled soda (off brand cola or punch works well) (If you want to make iced coffee you must call us for clearance and instructions).

Instructions:

- 1) **Electricity:** Unit must be directly plugged into outlet without any other major appliances, you may not use your own extension cord. If you need an extension cord you must use one provided by us.
- 2) **Check Hopper Seals:** Before filling hoppers, pour 1 gallon of water in each hopper and turn augur on for 2 minutes to make sure that seals in back have not been jarred loose. If water leaks from the rear, drain remaining water and gently push front of hopper down and inward until button at lower left front of hopper engages. Repeat procedure. If you cannot obtain tight seal, carefully remove hopper and coat the seal.
- 3) **Starting Machine:** If using both hoppers start the machine by pushing the left and right side augur ON/OFF switches until AUGER ON appears. Next, turn on the left and right side control switches (OFF, ICE OR CHILL) until ICE appears in capital letters. (If ice is in lower case, the unit is not freezing)
- 4) **Adding more Product:** You can continue to add more soda as you serve even though it will make it more liquid, once the mixing blades become exposed, it takes another 30 to 40 minutes to freeze up again
- 5) **When Finished using the Machine:** Turn off the machine. Empty the hoppers. Add one gallon of warm water to each hopper and drain. Do this twice. This helps rinse out the machine. Do not do any other cleaning.
